

DON'T LET HACKERS SCHOOL YOU.

IS YOUR DISTRICT'S NETWORK SECURE?

K-12 school districts of all sizes run the risk of having a data breach occur within their very own networks due to the goldmine of personal student, parent and employee information they harbor; and the transition from paper to virtual records makes this information increasingly more vulnerable. While it may seem safe to solely rely on various software to protect your network, technology user awareness is critical as well. It only takes one negligent or uninformed employee or student to fall for a phishing attempt to put the data of your entire district at risk. We are here to help your district take the necessary preventative measures.

Superintendents and district security officials turn to us for enterprise security testing and compliance audits which allow us to eradicate vulnerabilities within their networks, should they exist. Our Threat Hunting and Response team seeks and neutralizes hazardous agents and prevents them from causing any harm to the district's network. Our proactive approach allows our Security Operations Center to safeguard your data 24/7.
